

# Old Design

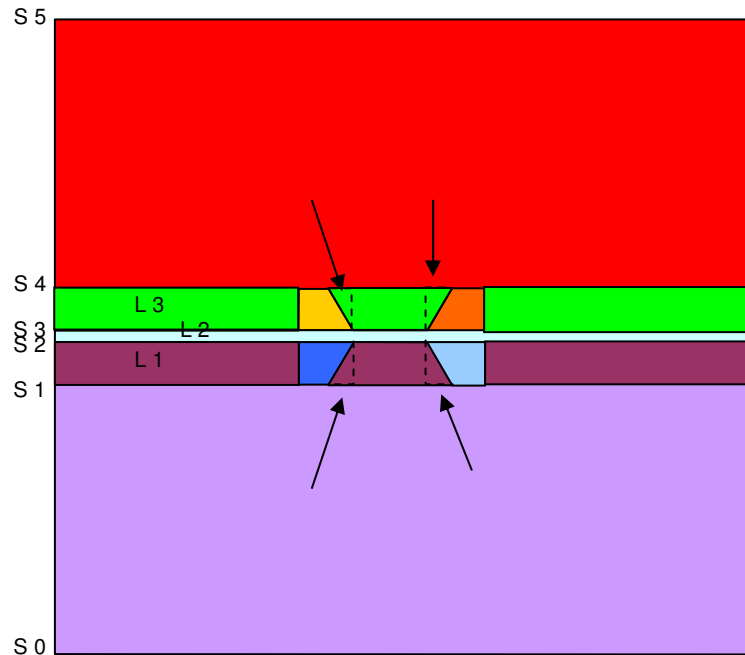

LAYER 'Elektroden\_Kanal\_unten'

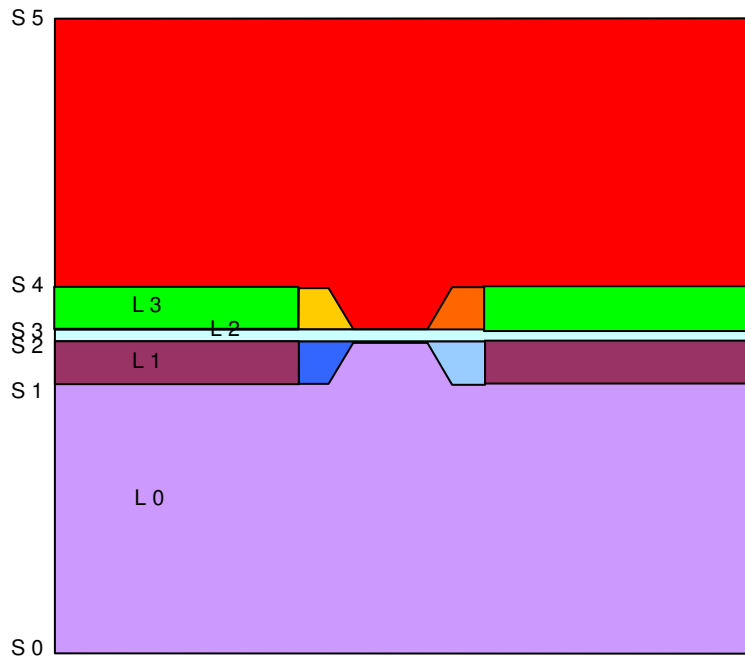

The cross section shape of the bar in the middle should become the shape of a trapezoid.

## New Design (...I can see two options)

Option 1:

Adding two slopes on each side of the two existing bars and keep them in Layer 1 (L1)

Option 2:

Trying to use surface 1 (S1) to shape a trapezoid cross-section of the two bars on layer 0 (L0)
